MTS-887

PIC16F Training Lab

MTS-887 PIC16F Training Lab uses Microchip's PIC16F887, a 8-bit microcontroller, to implement various I/O control experiments. This controller contains most of the powerful functions in modern MCUs nowadays and can be used for automation, motor control, device measurement, and mechanical controls...etc. PIC16F is popular and well-known by its economic cost, wide applicability, high accessibility and reliable stability.

MTS-887 contains several peripheral devices, from basic LED to advanced capacitive sensing module. The combination of these devices enable end users to create different kind of control experiments. Together with our friendly experiment manual, end users can learn the control of PIC MCU more conveniently and efficiently.

► Features

- The trainer uses PIC16F887 microcontroller chip which is ideal for beginners of learning programming language.
- Each experimental block uses individual control switch to avoid interference if sharing pin.
- Pins of the microcontroller have been connected to the peripherals inside the trainer. There is no need to connect it manually.
- "Reset" button: to reset the chip if errors occur.
- Development interface is reserved for advanced learners, which can connect the external modules to the chip pins.
